

EMERGENCY PREPAREDNESS PROFILE FOR: Berkshire County

The Emergency Preparedness Portal is the result of collaboration between the Bureau of Environmental Health and the Office of Preparedness and Emergency Management at the Department of Public Health. The Portal provides a variety of data on the different communities across Massachusetts and is intended to enhance inclusive community planning activities.

What is “Whole Community”?

Whole community refers to an approach that brings together residents, emergency management practitioners, organizational leaders, community leaders, and government officials to best conduct emergency management activities. Whole community collaboration allows for all stakeholders to assess the needs of their communities, organize their assets, and build effective strategies for handling threats and hazards.

What information is included in this Portal?

The Portal includes information on vulnerable populations, facility locations, and demographics within towns, counties, and Health and Medical Coordinating Coalition (HMCC) regions. The portal is based on the Bureau of Environmental Health’s Community Profiles.

What are Health and Medical Coordinating Coalitions?

Six regional HMCC have been established to promote cross-disciplinary, capabilities-based planning and advance regional health and medical capacity to prepare for, respond to, recover from, and mitigate the impact of large scale emergencies and disasters. The six core disciplines represented in the HMCC include acute care hospitals, community health centers, emergency management, emergency medical services, local public health, and long term care. Planning activities are consistent with the healthcare and public health preparedness capabilities as established by the Assistant Secretary of Preparedness and Response (ASPR) and the Centers for Disease Control and Prevention (CDC).

Who can use this Portal and what can it be used for?

The Portal is intended to be used by emergency planners, local public health officials, and the public who are interested in learning more about their communities. It provides data that can help those making emergency plans, and town officials who are interested in completing all hazards, inclusive disaster plans.

Summary Information for Selected Geography

The summary data presented in this report represent all selected geographies. For example, if you selected “community by census tract,” each summary indicator will first be calculated for each census tract, and the summary will be the average of the census tract values. If you only selected a single geography, the summary charts will reflect the same data as the tables and bar charts below the map window.

About the Data

Data presented on this profile are collected by many different partners of the MA EPHT Program and are the most up-to-date data available for each topic.

Demographics: US Census Bureau, American Community Survey (ACS), 5-year estimates, 2019 <https://www.census.gov/programs-surveys/acs>

Geography: Office of Geographic Information, Commonwealth of Massachusetts, MassIT, <http://www.mass.gov/anf/research-and-tech/it-serv-and-support/application-serv/office-of-geographic-information-massgis/>

Additional Map Resources

[Massachusetts
Toxics Users and
Climate
Vulnerability
Factors](#)

Identifies toxics users in relation to flood & hurricane zones and other vulnerable areas. This effort will build sustainable and replicable models for incorporating toxics use reduction into emergency preparedness and climate change resiliency planning.

[Social
Vulnerability Index](#)

Social vulnerability refers to the resilience of communities when confronted by external stresses on human health, stresses such as natural or human-caused disasters, or disease outbreaks. Reducing social vulnerability can decrease both human suffering and economic loss. ATSDR's Social Vulnerability Index uses U.S. census variables at tract level to help local officials identify communities that may need support in preparing for hazards, or recovering from disaster.

[MEMA Power
Outage Map](#)

MEMA real time map tracking power outages throughout Massachusetts.

[Massachusetts
Hurricane
Evacuation Zones](#)

Identifies evacuation zones for hurricanes. Also features PDFs for individual towns throughout Massachusetts.

[RX Open](#)

Maps out pharmacies that are open in a disaster. Can be activated for a disaster.

[Empower](#)

Maps of medical devices that run on power.

Indicator Descriptions

Age: Certain age groups are more at risk to adverse health outcomes than others: the youngest and oldest populations. Older and younger populations often rely on caregivers to help prepare for and respond to an emergency. These populations are less adaptable in the event of an emergency for many reasons including, reliance on routine, susceptibility to illness, and reduced mobility.

Indicator based on data from table B01001 from the 5-year 2015-2019 American Community Survey conducted by the U.S. Census Bureau.

Poverty: Poor households are more susceptible to the effects of emergencies due to many social and physical factors. Low income persons or families do not have reliable access to healthcare, making them less resilient to changes in health status. They are also generally less likely to own vehicles, which can affect their ability to evacuate. Low income persons or families are less able to absorb the financial impacts of being out of work for a period of time due to a disaster.

Indicator based on data from table B17001 from the 5-year 2015-2019 American Community Survey conducted by the U.S. Census Bureau.

Race/Ethnicity: Stemming from a long history of inequality, minority populations are more vulnerable to adverse health outcomes than non-minority populations. Social and physical factors such as lack of economic resources, cultural barriers, and housing conditions can contribute to health status, emergency preparedness, and disaster recovery. For example, minority groups concentrated in urban areas may be more susceptible to heat illnesses because they live in older housing that is poorly insulated or may lack financial means to own or operate air-conditioning equipment. Targeted communications through social networks or community and faith-based organizations may be more effective than conventional communication methods.

Indicator based on data from tables B02001 and B03002 from the 5-year 2015-2019 American Community Survey conducted by the U.S. Census Bureau.

Language Spoken/No English Spoken: Non-English speaking people and those who have limited ability to read, write, or understand English may be vulnerable in an emergency. Individuals with limited English proficiency (LEP) experience inequalities that can prevent access to health insurance and care, resulting in health disparities. Language barriers can even arise between people who speak the same language, so translation services must therefore be sensitive to colloquialisms, dialects and regional differences. These barriers can increase risk of nonadherence to medication or create stress for those receiving care. LEP is a source of social isolation, which may limit situational awareness. People with LEP may engage in daily activities differently from those fluent in English (e.g. using visual symbols and memory to navigate public transit routes). They may not understand the role or presence of police and other law enforcement officers, and they might not understand instructions. Many non-English speakers rely on word-of-mouth or community/faith-based organizations for communication updates. Identifying primary languages within a service area is essential for communicating emergencies and available resources, and identifying organizational needs (e.g. translation and interpretive services) to ensure that those that have LEP remain safe and prepared for emergencies and receive quality care and access to resources.

Indicator based on data from table B16007 from the 5-year 2015-2019 American Community Survey conducted by the U.S. Census Bureau.

Less than 9th grade education: People who do not have a high school education may be more vulnerable in emergencies. This may partly be because individuals with less education often have limited material resources, lower social and political capital, and exhibit more adverse health-related behaviors (e.g. smoking) compared to individuals with more education. In general, less education is associated with poorer health outcomes (e.g. higher rates of infectious disease and lower life expectancy). Health and emergency officials should use clear communications during emergencies to accommodate lower reading levels.

Indicator based on data from Table B15003 from the 5-year 2015-2019 American Community Survey conducted by the U.S. Census Bureau.

Populations with disabilities: Disability is an umbrella term that refers to a diverse group of people who live with significant limitations to function, movement, or activity. People with disabilities have experienced a long history of discrimination and institutionalization that contributes to health disparities observed today. People with disabilities are more likely to have chronic diseases and conditions such as diabetes, cardiovascular disease, and hypertension. They may also rely on caregivers, which can be socially isolating and increases vulnerability. It is important to identify the type of disabilities common in a service area to ensure that the needs of people with disabilities are met during an emergency.

Indicator based on data from Table B18108 from the 5-year 2015-2019 American Community Survey conducted by the U.S. Census Bureau.

Types of disability: The term disability encompasses a broad range of limitations and health statuses that include:

- Hearing difficulty: deaf or having serious difficulty hearing (DEAR).
- Vision difficulty: blind or having serious difficulty seeing, even when wearing glasses (DEYE).

- Cognitive difficulty: physical, mental, or emotional problem that lead to difficulty remembering, concentrating, or making decisions (DREM).
- Ambulatory difficulty: having serious difficulty walking or climbing stairs (DPHY).
- Self-care difficulty: having difficulty bathing or dressing (DDRS).
- Independent living difficulty: physical, mental, or emotional problem that lead to difficulty doing errands alone such as visiting a doctor's office or shopping (DOUT).

Indicator based on data from Tables B18102 - B18107 from the 5-year 2015-2019 American Community Survey conducted by the U.S. Census Bureau. Percent of population is calculated using the total number of people for that disability type.

Populations with no vehicle available: Lack of car ownership can present a challenge to accessing amenities and healthcare and evacuating during emergencies. Vehicle ownership tends to be lowest in urban areas, especially among individuals with lower income. In the event that an evacuation is required, individuals with no vehicle may be stranded in place, particularly if public transportation options are not available or temporarily down. Rural individuals with no vehicle may be even more vulnerable due to increased isolation and less transportation infrastructure. Shelters or other emergency response sites may be farther from residents in rural locations, making lack of a vehicle more problematic. Planners should consider alternate transportation options (e.g. use of school buses) to ensure those without vehicles can safely access shelters and other resources.

Indicator based on data from Table B08014 from the 5-year 2015-2019 American Community Survey conducted by the U.S. Census Bureau.

Populations 65 years or older, living alone: Living alone can exacerbate age-related vulnerabilities experienced by the elderly, particularly in emergency situations. Elderly persons are more likely to have chronic diseases, conditions, and physical or cognitive disabilities (e.g. dementia). Living alone can result in social isolation, which may result in decreased access to emergency-related communications. This population may be less willing or able to leave home or seek shelter. Planners should attempt to identify where elderly community members live to ensure this population receives needed resources during and following emergencies.

Indicator based on data from Table B09020 from the 5-year 2015-2019 American Community Survey conducted by the U.S. Census Bureau.
